

How a wireless alarm process ensures **personal safety for loneworkers**

For people working in potential hazardous environments or on an isolated site, personal security is a basic condition. No matter what kind of work that is carried out, the loneworker may need to get assistance when a dangerous situation appears. In all workplaces where staff safety has top priority, the Ascom wireless communication solution for loneworkers is a must.

Quicker response for better personal security

- ▶ An alarm is sent by a loneworker in a hazardous situation either by pushing the alarm button on his/her handset or via an automatic alarm triggered by "man-down" or "no-movement".
- ▶ The alarm message is sent simultaneously to all members of a rescue team
- ▶ The information in the message include the identity of the loneworker and his/her position on the site
- ▶ All members of the rescue team who have accepted the alarm will proceed to the location of the loneworker
- ▶ The process closes when the loneworker has been rescued.

Benefits of an Ascom wireless alarm solution for loneworkers

The solution ensures quicker response to a person in need and makes it easier to locate the alarming person. As a result, you can prevent a disaster to develop. The wireless alarm solution eliminates the risks of working alone and creates a safer environment for the employees.
